## Product Description

The KF100 Plus Gas Ultraviolet Analyzer, based on **UV** absorption spectroscopy technology and chemometric algorithms, can be used to measure the concentration of **SO<sub>2</sub>, NO<sub>x</sub>, O<sub>2</sub>, NH<sub>3</sub>, CL<sub>2</sub>, O<sub>3</sub>, H<sub>2</sub>S** and other gases. With high accuracy, high reliability, fast response, and wide applicability, it can be widely used in online environmental monitoring, industrial control, security monitoring and other occasions. The performance indicators of the KF100 series have reached or exceeded those of other domestic and foreign competing products.

### >>>Technical Features

The analyzer gets the UV absorption spectrum from the following optical technology platform that consists of a light source, a gas chamber, fibre optics, a spectrometer(including a diaphragm, holographic gratings, and a linear array detector) and other optical components.

The UV-visible light emitted from the light source enters into the gas chamber through the optical windows, where it is absorbed by the sample gas flowing through the gas chamber. Then the light carrying the absorbing information of the tested sample gas is converged by a lens and coupled into the optical fibre. After the light is transmitted into the spectrometer through the optical fibre for light splitting and sampling, the absorption spectrum of the gas can be obtained.

By using the DOAS technology to analyze the spectrum, the concentration of relevant contents in the gas can be analyzed.

### >>>Technology Comparison

Item	UV Hot-Wet Method	NDIR
Spectral Range	Complete and continuous absorption spectra obtained through holographic grating and diode array detection	Non Dispersive, characteristic absorption spectra obtained through band-pass filter
Linear Response	High wavelength resolution secures linear response	band-pass filtration compromises linear response
SO <sub>2</sub> Loss	Hot-wet prohibits SO <sub>2</sub> dissolution	Condensation inevitably causes SO <sub>2</sub> loss
Sampling System	Heat tracing. Requests only dust filtration, simple and no corrosive	Cold-dry. Requests dust filtration, condensation, water removal and corrosion proof
Zero Calibration Period	Long (DOAS algorithm)	Short
Anti-Interference	The combination of complete & continuous absorption spectra, high wavelength resolution, DAOS algorithm erases interference from dust, moisture and background gases	Vulnerable to moisture interference
Gas Cell	Connected by optical fiber, easy to replace and low maintenance cost	Complex to replace and maintenance
Maintenance Reliability	No moving parts	Moving parts existed
